Neutron reference radiations for calibrating neutron-measuring devices used for radiation protection purposes and for determining their response as a function of neutron energy

*Rayonnements neutroniques de référence destinés à l'étalonnage des instruments
de mesure des neutrons utilisés en radioprotection et à la détermination de leur
réponse en fonction de l'énergie des neutrons*

Reference number
ISO 8529 : 1989 (E)

Contents

	Page
Foreword	iii
1 Scope and field of application	1
2 Normative references	2
3 Definitions of quantities and units	2
4 Reference radiations for the calibration of neutron-measuring devices	4
4.1 General properties	4
4.2 Characteristics of sources for routine calibrations	5
4.3 Neutron fluence rate produced by a source	5
4.4 Calibration of the neutron source strength	6
4.5 Irradiation facility	7
5 Reference radiations for the determination of the response of neutron-measuring devices as a function of neutron energy	7
5.1 General properties	7
5.2 Reactor reference neutrons	8
5.3 Photoneutron sources	8
5.4 Accelerator-produced neutrons	9
 Annexes	
A Graphical and tabular representation of the neutron spectra for radionuclide sources	10
B "Fluence" to "dose" conversion factors for radionuclide sources	17
C "Fluence" to "dose" conversion factors for monoenergetic neutrons	18
D Conventional thermal neutron fluence rate	19
E Bibliography	20

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8529 was prepared by Technical Committee ISO/TC 85, *Nuclear energy*.

Annexes A, B, C and D form an integral part of this International Standard. Annex E is for information only.
