| <b>3 Terms and definitions</b>                                 | <b>1</b>  |
| <b>4 Principles of cell line authentication</b>                | <b>4</b>  |
| 4.1 General                                                    | 4         |
| 4.2 Confirmation of cell origin                                | 4         |
| 4.3 Detection of cross-contamination                           | 4         |
| 4.3.1 Detection of cell line inter-species cross-contamination | 4         |
| 4.3.2 Detection of cell line intra-species cross-contamination | 5         |
| 4.4 Identification of cell line-specific characteristics       | 5         |
| 4.4.1 Detection of cell line genome heterogeneity              | 5         |
| 4.4.2 Detection of cellular differentiation                    | 6         |
| <b>5 Application scenarios of cell line authentication</b>     | <b>6</b>  |
| <b>6 Sample preparation</b>                                    | <b>7</b>  |
| <b>7 Method options for cell line authentication</b>           | <b>7</b>  |
| 7.1 General                                                    | 7         |
| 7.2 DNA-based cell line authentication methods                 | 7         |
| 7.2.1 Short tandem repeat profiling                            | 7         |
| 7.2.2 Single nucleotide polymorphism profiling                 | 9         |
| 7.2.3 DNA barcoding                                            | 9         |
| 7.2.4 Multiplex PCR                                            | 10        |
| 7.2.5 Whole genome sequencing                                  | 10        |
| 7.3 Related methods for cell line identification               | 10        |
| <b>8 Authentication method selection</b>                       | <b>11</b> |
| 8.1 General                                                    | 11        |
| 8.2 Cell origin                                                | 11        |
| 8.2.1 Confirmation of cell line origin                         | 11        |
| 8.2.2 Identification of cell line gene mutations               | 11        |
| 8.2.3 Identification of cell line-specific properties          | 11        |
| 8.3 Species types of cross-contamination                       | 11        |
| 8.3.1 Cell line inter-species cross-contamination              | 11        |
| 8.3.2 Cell line intra-species cross-contamination              | 12        |
| 8.4 Cell culture methods                                       | 12        |
| 8.4.1 Authentication for co-cultured cells                     | 12        |
| 8.4.2 Authentication for <i>ex vivo</i> cell culture           | 12        |
| 8.4.3 Authentication for laboratory operation                  | 12        |
| 8.5 Authentication purpose                                     | 12        |
| <b>9 Quality control</b>                                       | <b>13</b> |
| 9.1 Operator training                                          | 13        |
| 9.2 Instruments and equipment                                  | 13        |
| 9.3 Reagents                                                   | 14        |
| 9.4 Validation and verification of methods                     | 14        |
| 9.4.1 General                                                  | 14        |
| 9.4.2 Validation                                               | 14        |
| 9.4.3 Verification                                             | 14        |
| <b>10 Report</b>                                               | <b>15</b> |
| 10.1 Reporting                                                 | 15        |
| 10.2 Evaluation of measurement uncertainty                     | 15        |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 276, *Biotechnology*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
