Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 27006 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 27, *IT Security techniques*.

This second edition cancels and replaces the first edition (ISO/IEC 27006:2007), which has been technically revised.

Introduction

ISO/IEC 17021 sets out criteria for bodies operating audit and certification of organizations' management systems. If such bodies are to be accredited as complying with ISO/IEC 17021 with the objective of auditing and certifying information security management systems (ISMS) in accordance with ISO/IEC 27001:2005, some additional requirements and guidance to ISO/IEC 17021 are necessary. These are provided by this International Standard.

The text in this International Standard follows the structure of ISO/IEC 17021, and the additional ISMS-specific requirements and guidance on the application of ISO/IEC 17021 for ISMS certification are identified by the letters "IS".

The term "shall" is used throughout this International Standard to indicate those provisions which, reflecting the requirements of ISO/IEC 17021 and ISO/IEC 27001, are mandatory. The term "should" is used to indicate recommendation.

One aim of this International Standard is to enable accreditation bodies to more effectively harmonize their application of the standards against which they are bound to assess certification bodies.

NOTE Throughout this International Standard, the terms "management system" and "system" are used interchangeably. The definition of a management system can be found in ISO 9000:2005. The management system as used in this International Standard is not to be confused with other types of system, such as IT systems.
