

TECHNICAL REPORT

ISO/TR 9464

First edition
1998-05-01

Guidelines for the use of ISO 5167-1:1991

Guide pour l'emploi de l'ISO 5167-1:1991

Contents

Page

Section 1 — Guidelines relating to specific clauses in ISO 5167-1:1991

1	Introduction	1
2	Normative references	2
3	Definitions	2
4	Symbols and subscripts	2
5	Principle of measurement and computation: Examples	3
6	General requirements for measurements	5
7	Installation requirements	8
8	Orifices plates	22
9	Nozzles	32
10	Venturi tubes	32
11	Uncertainties	36

Section 2 — Information of a general nature, relevant to the application of ISO 5167-1

12	Secondary instrumentation	37
12.1	Introduction	37
12.2	Measurement of pressure and differential pressure	38
12.3	Measurement of temperature (see [ISO 5167-1, 3.4.2] and Code of Practice 3.4.2.1)	44
12.4	Determination of density (see [ISO 5167-1, 5.4])	48
12.5	Electrical supply and electrical installations	54
12.6	References	54

Annex A	Principles of measurement and computation	55
Annex B	References for physical data	71
Annex C	Computation of compressibility factor for natural gases .	73

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The main task of technical committees is to prepare International Standards, but in exceptional circumstances a technical committee may propose the publication of a Technical Report of one of the following types:

- type 1, when the required support cannot be obtained for the publication of an International Standard, despite repeated efforts;
- type 2, when the subject is still under technical development or where for any other reason there is the future but not immediate possibility of an agreement on an International Standard;
- type 3, when a technical committee has collected data of a different kind from that which is normally published as an International Standard (“state of the art”, for example).

Technical Reports of types 1 and 2 are subject to review within three years of publication, to decide whether they can be transformed into International Standards. Technical Reports of type 3 do not necessarily have to be reviewed until the data they provide are considered to be no longer valid or useful.

ISO/TR 9464, which is a Technical Report of type 3, was prepared by Technical Committee ISO/TC 30, *Measurement of fluid flow in closed conduits*, Subcommittee SC 2, *Differential pressure methods*.
