Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 15615 was prepared by the European Committee for Standardization (CEN) in collaboration with Technical Committee ISO/TC 44, *Welding and allied processes*, Subcommittee SC 8, *Equipment for gas welding, cutting and allied processes*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

Throughout the text of this document, read "...this European Standard..." to mean "...this International Standard...".

Annex A forms a normative part of this International Standard.

Contents

	page
Foreword.....	v
1 Scope	1
2 Normative references	1
3 Terms and definitions.....	1
4 Design and materials.....	2
4.1 Design	2
4.2 Materials.....	2
5 Requirements	2
5.1 General.....	2
5.2 General requirements.....	2
5.3 Additional requirements to be met by specific types of devices.....	3
6 Type tests	4
6.1 General.....	4
6.2 Reference values and accuracy of instruments	4
6.3 Test gases.....	4
6.4 Acetylene decomposition test	4
6.5 Pressure resistance test	7
6.6 Non-return valve test	7
6.7 Endurance test	8
6.8 Trip pressure test for automatic pressure actuated shut-off valve.....	8
6.9 Internal gas leakage test	9
6.10 Trip test for automatic quick acting shut-off device	9
7 Manufacturer's instructions.....	10
8 Marking	10
Annex A (normative) Summary of tests.....	11
