
**Water quality — Spectrometric
determination of phosphorus using
ammonium molybdate**

*Qualité de l'eau — Dosage spectrométrique du phosphore en utilisant
le molybdate d'ammonium*

Contents

1 Scope	1
2 Principle.....	1
3 Determination of orthophosphate.....	2
4 Determination of orthophosphate after solvent extraction	6
5 Determination of hydrolysable phosphate and orthophosphate.....	8
6 Determination of total phosphorus after peroxodisulfate oxidation	11
7 Determination of total phosphorus after nitric acid-sulfuric acid digestion	13
Annex A Precision data.....	17
Annex B Interferences.....	19
Annex C Bibliography	20

Foreword

ISO (the International Organization for Standardization) is a world-wide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 6878 was prepared by Technical Committee ISO/TC 147, *Water quality*, Subcommittee SC 2, *Physical, chemical, biochemical methods*.

This first edition of ISO 6878 cancels and replaces the first edition of ISO 6878-1:1986, which has been technically revised.

Annexes A, B and C of this International Standard are for information only.
