Water quality — Determination of selected monovalent phenols —

Part 1:

Gas-chromatographic method after enrichment by extraction

Qualité de l'eau — Dosage des phénois monovalents sélectionnés — Partie 1: Méthode par chromatographie en phase gazeuse après enrichissement par extraction

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8165-1 was prepared by Technical Committee ISO/TC 147. Water quality. Sub-Committee SC 2, Physical, chemical, biochemical methods.

ISO 8165 consists of the following parts, under the general title Water quality — Determination of selected monovalent phenols:

- Part 1: Gas chromatographic method after enrichment by extraction
- Part 2: Method after derivatization with pentafluoro-benzoyl bromide
