### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

## CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative references .....	6
3 Terms and definitions .....	7
4 Overview .....	7
5 System architecture and inverter selection .....	8
6 General considerations.....	8
6.1 Overview.....	8
6.2 IP rating.....	8
6.3 Ambient temperature.....	8
6.4 Altitude .....	9
6.5 Direct sunlight.....	9
6.6 Efficiency.....	9
6.7 No-load and stand-by power requirements .....	9
6.8 Ventilation requirements .....	9
6.9 Earthing arrangements.....	9
6.10 Waveform quality .....	9
6.11 Compatibility with loads that produce significant harmonics .....	9
6.12 Electromagnetic interference.....	10
6.13 Load growth .....	10
6.14 Protection .....	10
7 Variable speed drives and T1I-c systems – REN systems operating with no storage, DC source to AC application .....	10
7.1 General.....	10
7.2 Characteristics of the inverter .....	11
7.2.1 Frequency control.....	11
7.2.2 MPPT .....	11
7.3 Sizing of the inverter.....	11
7.3.1 General .....	11
7.3.2 AC voltage.....	12
7.3.3 AC current.....	12
7.3.4 DC voltage .....	12
7.3.5 DC current.....	12
7.4 VFD standards.....	12
7.5 Variations on the architecture .....	12
8 Uni-directional grid creating inverters that work with batteries – Type T2I systems – REN production with energy storage.....	12
8.1 General.....	12
8.2 Characteristics of the inverter .....	13
8.2.1 Grid creation.....	13
8.3 Sizing of the inverter.....	14
8.3.1 Input DC voltage.....	14
8.3.2 Input DC current.....	14
8.3.3 AC current and power .....	14
8.3.4 AC voltage.....	14
8.3.5 Power factor handling range .....	14
8.4 Variations on the architecture .....	14

9	Uni-directional inverters that synchronize to the grid – Type T3I systems – REN and diesel production without energy storage .....	15
9.1	General.....	15
9.2	Characteristics of the inverter .....	16
9.2.1	General .....	16
9.2.2	Grid synchronizing .....	16
9.2.3	MPPT tracking .....	16
9.2.4	Active power control .....	16
9.2.5	Grid support .....	16
9.3	Sizing of the inverter .....	16
9.3.1	Input DC voltage.....	16
9.3.2	Input DC current.....	17
9.3.3	Output AC current and power .....	17
9.4	Variations on the architecture .....	17
10	Bi-directional grid creating inverters that work with batteries – Type T4I systems, RE and diesel with energy storage .....	17
10.1	General.....	17
10.2	Characteristics of the inverter .....	18
10.2.1	Grid creation.....	18
10.2.2	Battery management.....	18
10.2.3	Frequency modulation .....	18
10.2.4	Master-slave.....	19
10.2.5	Reactive power control .....	19
10.3	Sizing the inverter.....	19
10.3.1	General .....	19
10.3.2	Input DC voltage.....	19
10.3.3	Input DC current.....	19
10.3.4	Output AC voltage .....	19
10.3.5	Output AC current.....	19
10.4	Variations on the architecture .....	20

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**RENEWABLE ENERGY AND HYBRID SYSTEMS  
FOR RURAL ELECTRIFICATION –**
**Part 9-7: Recommendations for selection of inverters****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a technical specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC TS 62257-9-7, which is a Technical Specification, has been prepared by IEC technical committee 82: Solar photovoltaic energy systems.

The text of this Technical Specification is based on the following documents:

Enquiry draft	Report on voting
82/1473/DTS	82/1546A/RVDTS

Full information on the voting for the approval of this technical specification can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

This part of IEC 62257 is to be used in conjunction with IEC 62257 (all parts).

A list of all parts in the IEC 62257 series, published under the general title *Renewable energy and hybrid systems for rural electrification*, can be found on the IEC website.

Future standards in this series will carry the new general title as cited above. Titles of existing standards in this series will be updated at the time of the next edition.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.
