About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms and definitions	7
3.1 Physical concepts	8
3.2 Types of devices.....	9
3.3 General terms	9
3.4 Terms related to ratings and characteristics.....	10
3.4.1 Switching times	10
3.4.2 Output and current characteristics	12
3.5 Spatial profiles and spectral characteristics	15
4 Essential rating and characteristics	15
4.1 Type	15
4.2 Semiconductor	15
4.2.1 Material	15
4.2.2 Structure	15
4.3 Details of outline drawing and encapsulation.....	16
4.4 Limiting values (absolute maximum ratings over the operating temperature range, unless otherwise stated)	16
4.5 Electrical and optical characteristics	16
4.6 Supplementary information	18
5 Measurement methods	18
5.1 Power measurement.....	18
5.2 Output stability.....	18
5.2.1 Relative intensity noise.....	18
5.2.2 Carrier-to-noise ratio	18
5.2.3 Output power stability	20
5.2.4 Output energy stability.....	20
5.2.5 Temporal pulse shape	20
5.3 Time domain profile	20
5.3.1 Switching times	20
5.3.2 Small signal cut-off frequency (f_c).....	22
5.4 Lifetime.....	22
5.5 Optical characteristics of the laser beam.....	23
5.5.1 Polarization	23
5.5.2 Half-intensity angle $\theta_{1/2}$ and $1/e^2$ -intensity angle θ_{1/e^2}	23
5.5.3 Half-intensity width $D_{1/2}$ and $1/e^2$ -intensity width D_{1/e^2}	25
5.5.4 Spectral characteristics and other spatial profile.....	26
Annex A (informative) Reference list of technical terms and definitions related to spatial profile and spectral characteristics.....	27
Annex B (informative) Reference list of measurement methods related to spatial profile and spectral characteristics.....	31
Annex C (informative) Reference list of technical terms and definitions, and measurement methods, related to power measurement and lifetime.....	32
Bibliography.....	33

Figure 1 – Example of the device with window but without lens	10
Figure 2 – Switching times	12
Figure 3 – Threshold current of a laser diode	14
Figure 4 – Basic circuit diagram	19
Figure 5 – Basic circuits diagram	21
Figure 6 – Typical pulse response diagram	22
Figure 7 – Half-intensity angle	23
Figure 8 – Relationship between the specified plane and the mechanical reference plane	23
Figure 9 – Basic measurement setup diagram.....	24
Figure 10 – Measuring arrangement for $D_{1/2}$ and D_{1/e^2}	25
Table 1 – Electrical and optical characteristics	17

INTERNATIONAL ELECTROTECHNICAL COMMISSION

SEMICONDUCTOR DEVICES –**Part 5-4: Optoelectronic devices –
Semiconductor lasers**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60747-5-4 has been prepared by subcommittee 47E: Discrete semiconductor devices, of IEC technical committee 47: Semiconductor devices. It is an International Standard.

This second edition cancels and replaces the first edition published in 2006. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) References for the terms and definitions related to the lighting area, IEC 60050-845, are revised based on IEC 60050-845:2020;
- b) Emission angle is changed to radiation angle in 3.3.2;
- c) Definitions of rise time and fall time in 3.4.1 are revised based on the publication IEC 60050-521:2002;
- d) Spectral linewidth is added to Table 1 in Clause 4;
- e) Conditions for carrier-to-noise ratio of Table 1 in Clause 4 is amended.

- f) Error in the equation for carrier-to-noise ratio in 5.2.2 is corrected;
- g) Precaution against the equipment used for carrier-to-noise ratio measurement is added in 5.2.2;
- h) Explanation for the measurement method of the small signal cut-off frequency in 5.3.2 of the first edition is deleted because it has been defined in the latest version of ISO 11554;
- i) Reference document for the lifetime in 5.4 is amended;
- j) Precaution against the measuring arrangement used for the half-intensity width and $1/e^2$ -intensity is added in 5.5.3;
- k) Reference tables in Annex A, Annex B and Annex C are revised by following the latest version of ISO publications.

The text of this International Standard is based on the following documents:

Draft	Report on voting
47E/783/FDIS	47E/785/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 60747 series, published under the general title *Semiconductor devices*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

The first edition of this part of IEC 60747 was published in 2006 under close collaboration between IEC TC 47 SC 47E (IEC TC 47 SC 47C at that moment) and ISO TC 172 SC 9. The scope of IEC/TC47/SC47E includes laser diodes as one of the discrete semiconductor devices while that of ISO/TC172/SC9 includes laser diodes as one of the laser and laser-related equipment. Consequently, technical contents in this publication extend over IEC and ISO.

In order to harmonize the IEC and ISO laser-related standards in 1997, a joint working group (JWG) consisted of the experts from both IEC SC 47E and ISO TC 172 SC 9 was established. As a result of discussion, items based on the electrical and electronic technologies are dealt with by subcommittee 47E of IEC technical committee 47, while optical characteristics of the output beam are under the responsibility of subcommittee 9 of ISO technical committee 172. This was agreed, after long discussion, in 2002 between subcommittee 47E of IEC technical committee 47 and subcommittee 9 of ISO technical committee 172. Based on this agreement, terms and definitions, and test and measurement methods for the optical beam parameters in this part of IEC 60747-5-4 are referenced to the ISO standards that specify the topics.

The joint working group was disbanded in 2017. However, close co-operation and contact between two groups is indispensable in order to avoid any conflicts and to keep harmonization of IEC and ISO laser standards.

This second edition of IEC 60747-5-4 has been updated by following the revision and amendments in the latest versions of laser standards of both IEC and ISO.
