#### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing 21 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

#### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Catalogue IEC - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

#### Recherche de publications IEC - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 21 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

#### Glossaire IEC - [std.iec.ch/glossary](http://std.iec.ch/glossary)

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

## CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references .....	8
3 Terms and definitions .....	9
4 Interaction of smart grid and PEI .....	11
4.1 Main objectives.....	11
4.2 Safety.....	11
4.3 Proper functioning.....	11
4.4 Implementation of PEI.....	11
5 PEI concept.....	11
6 Types of PEI.....	13
6.1 General.....	13
6.2 Operating modes .....	13
6.3 Individual PEI.....	13
6.4 Collective PEI .....	14
6.5 Shared PEI .....	17
7 Electrical energy management system (EEMS).....	20
7.1 General.....	20
7.2 Architecture of EEMS.....	20
8 Technical issues.....	21
8.1 Safety issues .....	21
8.1.1 Protection against electric shock .....	21
8.1.2 Protection against overcurrent .....	25
8.1.3 Outage of the public network .....	26
8.1.4 Protection against transient overvoltages .....	27
8.2 Interaction with the public network .....	27
8.3 Energy storage .....	27
8.4 Design for flexibility of load and generators (demand/response).....	27
8.5 Electric vehicle charging .....	27
8.6 Selectivity between current protective devices .....	27
Annex A (informative) Objectives and concept of PEI.....	29
Annex B (informative) Operating modes.....	30
B.1 Operating modes for individual PEI .....	30
B.1.1 Direct feeding mode.....	30
B.1.2 Island mode.....	30
B.1.3 Reverse feeding mode .....	31
B.2 Operating modes for collective PEI .....	32
B.2.1 Direct feeding mode.....	32
B.2.2 Island mode.....	34
B.2.3 Reverse feeding mode .....	36
B.3 Operating modes for shared PEI .....	37
B.3.1 Direct feeding mode.....	37
B.3.2 Island mode.....	39
B.3.3 Reverse feeding mode .....	41

Annex C (informative) Interaction with the public network .....	43
C.1 General.....	43
C.2 National grid codes compliance with active and reactive power control .....	43
C.3 Voltage control.....	43
C.4 Frequency control.....	43
C.5 Load shedding programme.....	43
Annex D (informative) Architecture of PEI.....	44
D.1 Architecture of individual PEI .....	44
D.2 Architecture of collective PEI .....	44
D.3 Architecture of shared PEI .....	46
Annex E (informative) List of notes concerning certain countries.....	47
Bibliography.....	48
Figure 1 – Example of prosumer’s low-voltage electrical installation .....	12
Figure 2 – Example of electrical design of individual PEI .....	14
Figure 3 – Example of electrical design of collective PEI using DSO distribution system .....	14
Figure 4 – Example of electrical design of collective PEI with distribution system within PEI .....	15
Figure 5 – Example of electrical design of collective PEI with distribution system within PEI in parallel with DSO distribution system.....	16
Figure 6 – Example of electrical design of shared PEI using DSO distribution system.....	17
Figure 7 – Example of electrical design of shared PEI with distribution system within PEI....	18
Figure 8 – Example of electrical design of shared PEI with distribution system within PEI in parallel with DSO distribution system.....	19
Figure 9 – Connection to the local earthing arrangement (TN, TT and IT system) .....	23
Figure 10 – Estimation of the minimum earth fault current according to the operating mode (connected and island).....	24
Figure 11 – Example of double short-circuit protection for the same circuit .....	26
Figure 12 – Example of selectivity with various power supplies .....	28
Figure B.1 – Example of electrical design of individual PEI operating in direct feeding mode .....	30
Figure B.2 – Example of electrical design of individual PEI operating in island mode.....	31
Figure B.3 – Example of electrical design of individual PEI operating in reverse feeding mode.....	32
Figure B.4 – Example of electrical design of collective PEI operating in direct feeding mode with one single electrical installation.....	33
Figure B.5 – Example of electrical design of collective PEI operating in direct feeding mode with several electrical installations .....	34
Figure B.6 – Example of electrical design of collective PEI operating in island mode with one single electrical installation .....	35
Figure B.7 – Example of electrical design of collective PEI operating in island mode with several electrical installations .....	35
Figure B.8 – Example of electrical design of collective PEI operating in reverse feeding mode with one single electrical installation .....	36
Figure B.9 – Example of electrical design of collective PEI operating in reverse feeding mode with several electrical installations .....	37

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

## LOW-VOLTAGE ELECTRICAL INSTALLATIONS –

## Part 8-2: Prosumer's low-voltage electrical installations

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60364-8-2 has been prepared by IEC technical committee 64: Electrical installations and protection against electric shock.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
64/2298/FDIS	64/2335/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60364 series, published under the general title *Low-voltage electrical installations*, can be found on the IEC website.

The reader's attention is drawn to the fact that Annex E lists all of the “in-some-country” clauses on differing practices of a less permanent nature relating to the subject of this standard.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Historically, utilities were managing the public transmission and distribution network from the point of view of having a central production adapted to demand variation, a top-down energy flow, a production/consumption balance done by integrated utility companies and with rather passive users.

The following key factors are pushing the public electricity network to change:

- the increasing number of electronic devices used daily and the growing needs as well as future needs (e.g. charging electric vehicles) will result in the structural growing of electricity consumption;
- the mediated pressure on climate change results in pressure on CO<sub>2</sub> emissions reduction;
- the electricity market is also quickly changing due mainly to its unbundling and deregulation, and to the greater number of intermittent renewable energy sources (global and local);
- users' expectations are also evolving as a result of an increasing need for better public networks reliability and quality, the search for better economic performance and the willingness to pro-actively manage their energy;
- technological evolution should also be considered as information and communication technology (ICT) is affordable and new energy storage solutions are emerging.

All stakeholders directly involved in the electricity generation, transmission, distribution and consumption have new expectations:

- customers are willing to reduce electrical energy costs in order to meet environment targets (renewable energy, energy efficiency) but also wish to benefit from the quality of electricity supply;
- suppliers wish to limit customer churn rate with price and service management;
- producers expect to maximize their yield of assets, to optimize their investments and to take profit from energy trading;
- the aggregator wants to create conditions suitable for new market emergence;
- the transmission system operator (TSO) aspires to a robust transmission public network and to meet regulation objectives (price and level of services), while the distribution system operator (DSO) wants to meet regulation objectives (price and level of services), to reduce costs by productivity (including meter) and to have a flexible network;
- finally, governments and regulators are willing to create a competitive and sustainable energy market.

The objective of this document is to ensure that the low-voltage electrical installation is compatible with the current and future ways to deliver safely and functionally the electrical energy to current-using equipment either from the public network or from other local sources. This document is not intended to influence all stakeholders of electricity supply on how the electrical energy should be sold and delivered.
