#### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

---

#### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

#### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC -

#### [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications, symboles graphiques et le glossaire. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 500 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 25 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

# CONTENTS

FOREWORD..... 5

INTRODUCTION..... 7

1 Scope..... 9

2 Normative references ..... 9

3 Terms and definitions ..... 11

4 Properties and deterioration or degradation of oil ..... 12

5 Categories of equipment..... 12

6 Sampling of oil from equipment..... 13

7 In-service oil diagnostic tests..... 14

    7.1 General..... 14

    7.2 Colour..... 15

    7.3 Appearance ..... 15

    7.4 Breakdown voltage (BDV) ..... 15

    7.5 Water content ..... 16

        7.5.1 Water content in the oil and paper system ..... 16

        7.5.2 Influence of water on the solid and liquid dielectric system ..... 16

        7.5.3 Water in oil ..... 17

        7.5.4 Water in the solid insulation..... 18

        7.5.5 Interpretation of results..... 19

    7.6 Acidity..... 20

    7.7 Dielectric dissipation factor (DDF) and resistivity ..... 21

    7.8 Inhibitor content..... 22

        7.8.1 Oxidation stability ..... 22

        7.8.2 Monitoring of uninhibited and inhibited oils ..... 22

    7.9 Sediment ..... 22

    7.10 Sludge ..... 23

    7.11 Interfacial tension (IFT)..... 23

    7.12 Particles ..... 23

    7.13 Flash point..... 24

    7.14 Compatibility ..... 24

        7.14.1 General ..... 24

        7.14.2 Compatibility between different insulating mineral oils (miscibility)..... 24

    7.15 Pour point ..... 25

    7.16 Density ..... 25

    7.17 Viscosity ..... 26

    7.18 Polychlorinated biphenyls (PCBs) ..... 26

    7.19 Corrosive sulphur in mineral insulating oil ..... 26

        7.19.1 General ..... 26

        7.19.2 Corrosive sulphur ..... 27

        7.19.3 Potentially corrosive sulphur..... 27

        7.19.4 Dibenzyl disulphide (DBDS)..... 27

    7.20 Metal passivator..... 28

    7.21 Air release and foaming ..... 28

8 Evaluation of mineral insulating oil in new equipment ..... 28

9 Evaluation of oil in service ..... 29

    9.1 General..... 29

9.2	Frequency of examination of oils in service .....	30
9.3	Testing procedures .....	31
9.3.1	General .....	31
9.3.2	Field tests.....	31
9.3.3	Laboratory tests.....	32
9.4	Classification of the condition of oils in service .....	32
9.4.1	General .....	32
9.4.2	Transformers .....	32
9.4.3	Tap-changers .....	32
9.4.4	Instrument and protection transformers.....	33
9.4.5	Circuit breakers and switchgear.....	33
9.4.6	Oil filled and OIP bushings .....	33
9.5	Corrective action.....	34
10	Interpretation of results.....	35
11	Handling and storage.....	45
12	Replacement of oil in electrical equipment.....	46
12.1	Replacement of oil in transformers with an $U_m$ below 72,5 kV and in switchgear and associated equipment.....	46
12.2	Replacement of oil in transformers with an $U_m$ of 72,5 kV and above.....	46
12.3	Replacement of oil in electrical equipment contaminated with PCBs .....	47
13	Addition of metal passivators to in-service oil .....	47
14	Treatment.....	47
14.1	Warning .....	47
14.2	Classification of treatment processes .....	48
14.2.1	General .....	48
14.2.2	Off-line (de-energized) vs on-line (energized) treatment .....	48
14.2.3	Batch vs continuous mode treatment .....	49
14.3	Reconditioning (degassing, drying and filtration).....	49
14.3.1	General .....	49
14.3.2	Reconditioning equipment.....	50
14.3.3	Application to electrical equipment .....	52
14.4	Reclaiming.....	53
14.4.1	General .....	53
14.4.2	Reclaiming by percolation with single use sorbents .....	54
14.4.3	Reclaiming process using reactivating sorbents.....	54
14.4.4	Renewal of additives .....	56
14.5	Removal of PCBs using dehalogenation and related processes .....	56
14.5.1	General .....	56
14.5.2	Dehalogenation processes using sodium and lithium derivatives .....	56
14.5.3	Dehalogenation processes using polyethylene glycol and potassium hydroxide (KPEG).....	56
14.5.4	Dehalogenation in continuous mode by closed circuit process .....	56
14.5.5	Corrosive sulphur removal using KPEG .....	57
14.6	Criteria for oil reclamation and treatments.....	57
Annex A (normative)	Criteria for reclamation and treatments .....	58
A.1	General.....	58
A.2	Key parameters to measure before and after reclamation .....	58
A.3	Addition of inhibitor after reclamation .....	59

A.4	Time and location of sampling.....	60
Annex B (informative)	General guideline for moisture %RS for continuous online monitoring.....	61
Annex C (informative)	Normalizing water in oil for comparison and trending (historical practice) .....	62
C.1	General.....	62
C.2	Sampling temperature at or above 35 °C.....	62
Annex D (informative)	Material compatibility .....	64
Annex E (informative)	Test method for determination of sediment and sludge .....	66
E.1	Sediment determination .....	66
E.2	Sludge determination .....	66
Annex F (informative)	Contamination of oils with silicone .....	67
Bibliography	.....	68
Figure 1	– Water solubility curves for unused mineral oil as adapted from literature [5] (according to Formula (3)) .....	18
Figure 2	– Hysteresis loops of %RS vs. oil temperature in transformers with 3 different water content levels [5] .....	20
Figure 3	– Correlation between resistivity and dissipation factor [6] .....	21
Figure C.1	– Normalization factors according to Formula (C.2) .....	63
Table 1	– Categories of equipment .....	13
Table 2	– Tests for in-service mineral insulating oils .....	14
Table 3	– Recommended limits for mineral insulating oils after filling in new electrical equipment prior to first energization at site .....	29
Table 4	– Recommended frequency of testing .....	31
Table 5	– Transformers and reactors – Application and interpretation of tests.....	35
Table 6	– Tap-changers – Application and interpretation of tests .....	41
Table 7	– Instrument and protection transformers – Application and interpretation of tests .....	42
Table 8	– Circuit breakers and switchgear – Application and interpretation of tests.....	43
Table 9	– Oil filled and OIP bushings – Application and interpretation of tests .....	44
Table 10	– Summary of typical actions.....	45
Table 11	– Conditions for processing mineral insulating oils (both inhibited and uninhibited).....	50
Table 12	– Beta ratio related to filter efficiency .....	51
Table A.1	– Parameters where limits should be agreed upon .....	58
Table A.2	– Parameters where limits should not necessarily be set but should be measured for baseline and trending .....	59
Table B.1	– Moisture %RS, continuous online monitoring, general guideline .....	61

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MINERAL INSULATING OILS IN ELECTRICAL EQUIPMENT –  
SUPERVISION AND MAINTENANCE GUIDANCE**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60422 has been prepared by IEC technical committee 10: Fluids for electrotechnical applications. It is an International Standard.

This fifth edition cancels and replaces the fourth edition published in 2013. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) This new edition represents a major revision of the fourth edition, bringing this document in line with the latest developments in oil condition monitoring. New interpretation tables have been created, containing limits for oil parameters specific to plant type with suggested corrective actions in the tables and new test methods.
- b) The action limits for all oil tests have been revised and changes made where necessary to enable users to use current methodology and comply with requirements and regulations affecting safety and environmental aspects.

- c) Category O has been removed and is now incorporated within category A.
- d) Online moisture interpretation is now incorporated.
- e) More guidance on oil treatment (including reclamation criteria) is now available.
- f) Guidance has been updated regarding corrosive sulphur.
- g) In addition, this document incorporates changes introduced in associated standards since the fourth edition was published.

The text of this International Standard is based on the following documents:

Draft	Report on voting
10/1233/FDIS	10/1239/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Insulating mineral oils are used in electrical equipment employed in the generation, transmission, distribution, and use of electrical energy.

Monitoring and maintaining oil quality is essential to ensure the reliable operation of oil-filled electrical equipment. Codes of practice for this purpose have been established by electrical power authorities, power companies and industries in many countries.

A review of current experience reveals a wide variation of procedures and guidance. It is possible, however, to compare the value and significance of standardized oil tests and to recommend uniform criteria for the evaluation of test data.

If a certain amount of oil deterioration (by degradation or contamination) is exceeded, there is inevitably some erosion of safety margins and the question of the risk of failure should be considered. While the quantification of the risk can be very difficult, a first step involves the identification of potential effects of increased deterioration. The philosophy underlying this document is to furnish users with as broad a base of understanding of oil quality deterioration as is available, so that they can make informed decisions on inspection and maintenance practices.

Mineral oils are valuable resources and should be utilised accordingly. Used mineral oils are, by most regulations, deemed to be controlled waste. If spills occur, this can have a negative environmental impact especially if the oil is contaminated by persistent organic pollutants such as polychlorinated biphenyls (PCBs).

This document, whilst technically sound, is mainly intended to serve as a common basis for the preparation of more specific and complete codes of practice by users in the light of local circumstances. Sound engineering judgement will have to be exerted in seeking the best compromise between technical requirements and economic factors.

Reference should also be made to instructions from the equipment manufacturer.

### **General caution**

This document does not purport to address all the safety problems associated with its use. It is the responsibility of the user of this document to establish appropriate health and safety practices and determine the applicability of regulatory limitations prior to use.

The handling of mineral oils can be subject to local regulatory requirements and suppliers' safety datasheets.

### **Environment, health, and safety**

This document is applicable to mineral oils, chemicals and used sample containers. The disposal of these items can be subject to local regulatory requirements regarding their impact on the environment.

Attention is drawn to the fact that, at the time of writing this document, some mineral oils in service are known to be contaminated to some degree with other liquids, for example, silicone oils and PCBs.

Because of this, safety countermeasures should be taken to avoid risks to workers, the public and the environment during the life of the equipment, by strictly controlling spills and emissions. The disposal or decontamination of these oils can be subject to local regulatory requirements. Every precaution should be taken to prevent release of mineral oil into the environment.

Typically, each country has specific regulations around health and safety. Safety Data Sheets (SDS) are normally used by the industry internationally and are usually written in accordance with an international regulation set (such as REACH [1]<sup>1</sup>). Please consult the SDS from the suppliers of the insulating product that is used. These documents provide essential information regarding health, safety, and environmental impacts.
