About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About the IEEE

IEEE is the world's largest professional association dedicated to advancing technological innovation and excellence for the benefit of humanity. IEEE and its members inspire a global community through its highly cited publications, conferences, technology standards, and professional and educational activities.

About IEC/IEEE publications

The technical content of IEC/IEEE publications is kept under constant review by the IEC and IEEE. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD	4
INTRODUCTION	8
1 Scope	9
2 Normative references	9
3 Terms and definitions	9
4 General requirements	15
4.1 Applicability of IEC 60079-0	15
4.2 General	21
4.3 Mechanical strength	21
4.4 Terminations and connections	22
4.5 Circuit protection requirements for branch circuits	22
4.6 Temperature requirements	23
4.6.1 General	23
4.6.2 Stabilized design	23
4.6.3 Controlled design	23
5 Testing	26
5.1 Type tests	26
5.1.1 General	26
5.1.2 Dielectric test	26
5.1.3 Electrical insulation resistance test	26
5.1.4 Flammability test	27
5.1.5 Impact test	28
5.1.6 Deformation test	31
5.1.7 Cold bend test	32
5.1.8 Water resistance test	33
5.1.9 Integral components' resistance to water test	34
5.1.10 Verification of rated output	34
5.1.11 Thermal stability of electrical insulating material	37
5.1.12 Thermal performance test	37
5.1.13 Determination of maximum sheath temperature	39
5.1.14 Verification of start-up current	47
5.1.15 Verification of the electrical resistance of electrically conductive covering	48
5.1.16 UV and condensation test	48
5.1.17 Connection Integrity (integral components)	48
5.2 Routine tests	50
5.2.1 Dielectric test	50
5.2.2 Verification of rated output	51
6 Marking	51
6.1 Product markings for trace heaters	51
6.2 Field assembled components	51
6.3 Product markings for high temperature limiters and temperature controllers	52
7 Documentation	52
7.1 General	52
7.2 Circuit design documentation	52
7.3 Trace heating system documentation	52

7.3.1	General	52
7.3.2	For trace heating systems according to the product classification method	52
7.3.3	For trace heating systems according to stabilized design method	53
7.3.4	For trace heating systems according to controlled design method.....	53
7.4	Instructions for installation of trace heating system	53
7.5	Instructions for commissioning.....	54
7.6	Instructions for maintenance / repair or modification	54
Annex A (informative) Type test matrix for EPLs Gb/Gc/Db/Dc (refer to IEC 60079-14 for the relationship of EPLs to Zones)		55
Annex B (informative) Checklist for installation		57
Annex C (normative) Trace heater product design verification methodology		58
C.1	General.....	58
C.2	Design methodology and selection of trace heaters	58
C.3	Stabilized design calculations	58
C.4	Trace heater performance and equilibrium conditions	59
C.5	Heat loss calculations	61
C.6	Heat loss design safety factor	62
C.7	Maximum temperature determination	62
C.7.1	Theoretical pipe and sheath temperature calculations - Metallic applications	62
C.7.2	Theoretical vessel and sheath temperature calculations - Metallic applications	63
C.7.3	Sheath temperature - metallic applications utilizing a temperature limiter sensing the trace heater sheath or an artificial hot spot	65
C.7.4	Theoretical sheath temperature calculations - Non-metallic applications	65
C.7.5	Sheath temperature - Non-metallic applications utilizing a temperature limiter control sensing the trace heater sheath or an artificial hot spot	67
Annex D (normative) Calculation methodology for coverage of electrically conductive covering.....		68
Annex E (normative) Applications of trace heating in empty conduit.....		69
E.1	General.....	69
E.2	Maximum sheath temperature - trace heating internal to conduit.....	69
E.3	Pull-strength test.....	69
E.4	Rated output	69
E.5	Verification of start-up current.....	70
Annex F (normative) Requirements for Division 1 and Division 2 trace heating systems.....		71
F.1	Application	71
F.2	General.....	71
F.3	Terminations and connections.....	71
F.4	Control and temperature requirements	71
F.4.1	General	71
F.4.2	Stabilized design	71
F.4.3	Controlled design	72
F.4.4	Requirements for protective device in Divisions 1 and 2	72
F.5	Type tests	72
F.5.1	Division 1 trace heating equipment	72
F.5.2	Division 2 trace heating equipment	73
F.6	Marking.....	73

F.7 Instructions - Installation requirements.....	73
Annex G (normative) Type test matrix for Division 1 and 2 explosive atmospheres	75
Bibliography.....	77
Figure 1 – Flammability test.....	28
Figure 2 – Example of room temperature impact test	30
Figure 3 – Example of minimum temperature impact test	31
Figure 4 – Cold bend test.....	33
Figure 5 – Integral components resistance to water test.....	34
Figure 6 – Verification of rated output	36
Figure 7 – Product classification approach.....	40
Figure 8 – Verification of sheath temperatures using pipe sculpture	42
Figure 9 – Verification of sheath temperature, plate test	45
Figure 10 – Verification of sheath temperature - plate test with serpentine sample.....	45
Figure 11 – Plate test with two samples crossed over	46
Figure 12 – Plate test with a single sample crossed over	47
Figure 13 – Typical splice firm attachment apparatus.....	49
Figure C.1 – Equilibrium conditions for workpiece maintenance	59
Figure C.2 – Equilibrium conditions for upper limit evaluation	60
Table 1 – Application or exclusion of specific clauses of IEC 60079-0.....	15
Table 2 – Sheath temperature design conditions based on Equipment Protection Levels (EPLs) - Stabilized design approach	23
Table 3 – Sheath temperature design conditions based on Equipment Protection Levels - Controlled design approach	24
Table 4 – Test voltages for the dielectric test.....	26
Table A.1 – Determination of test samples.....	55
Table B.1 – Trace heater installation record - Example	57
Table F.1 – Division trace heating systems	71
Table F.2 - Sheath temperature design conditions - Stabilized design approach	72
Table F.3 – Sheath temperature design conditions - With temperature controller and/or high temperature limiter	72
Table G.1 – Applicable trace heater and trace heater pads and panels tests by installation location	75
Table G.2 – Applicable tests for integral components with trace heaters and trace heater pads and panels	76

Explosive atmospheres - Part 30-1: Electrical resistance trace heating - General and testing requirements

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC document(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation.

IEEE Standards documents are developed within IEEE Societies and Standards Coordinating Committees of the IEEE Standards Association (IEEE SA) Standards Board. IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of IEEE and serve without compensation. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards. Use of IEEE Standards documents is wholly voluntary. *IEEE documents are made available for use subject to important notices and legal disclaimers (see <https://standards.ieee.org/ipr/disclaimers.html> for more information).*

IEC collaborates closely with IEEE in accordance with conditions determined by agreement between the two organizations. This Dual Logo International Standard was jointly developed by the IEC and IEEE under the terms of that agreement.

- 2) The formal decisions of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees. The formal decisions of IEEE on technical matters, once consensus within IEEE Societies and Standards Coordinating Committees has been reached, is determined by a balanced ballot of materially interested parties who indicate interest in reviewing the proposed standard. Final approval of the IEEE standards document is given by the IEEE Standards Association (IEEE SA) Standards Board.
- 3) IEC/IEEE Publications have the form of recommendations for international use and are accepted by IEC National Committees/IEEE Societies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC/IEEE Publications is accurate, IEC or IEEE cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications (including IEC/IEEE Publications) transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC/IEEE Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and IEEE do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC and IEEE are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or IEEE or their directors, employees, servants or agents including individual experts and members of technical committees and IEC National Committees, or volunteers of IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE SA) Standards Board, for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC/IEEE Publication or any other IEC or IEEE Publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that implementation of this IEC/IEEE Publication may require use of material covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. IEC or IEEE shall not be held responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patent Claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

IEC/IEEE 60079-30-1 has been prepared by IEC technical committee 31: Equipment for explosive atmospheres, in cooperation with the Petroleum & Chemical Industry Committee of the IEEE Industrial Applications Society under the IEC/IEEE Dual Logo Agreement.

This publication is published as an IEC/IEEE Dual Logo standard.

This second edition of IEC/IEEE 60079-30-1 cancels and replaces the first edition of IEC/IEEE 60079-30-1 published in 2015. This edition constitutes a technical revision.

Users of this document are advised that interpretation sheets clarifying the interpretation of this document can be published. Interpretation sheets are available from the IEC webstore and can be found in the "history" tab of the page for each document.

This edition includes the following significant technical changes with respect to the previous edition:

The significance of changes between IEC/IEEE 60079-30-1, Edition 1.0 (2015) and IEC/IEEE 60079-30-1, Edition 2.0 (this document) is as listed below:

Changes	Clause	Type		
		Minor and editorial changes	Extension	Major technical changes
Redefined Maximum withstand temperature as it applies to the performance benchmark test.	3.20	X		
Separated maximum maintain temperature and maximum continuous operating temperature to clarify the meaning of both terms.	3.15 and 3.16	X		
Addition of requirements for controllers and high temperature limiters, added specific reference standards.	4.6.3			C1
Rewrite of the requirements for controlled design as it applies to the application of controllers and high temperature limiters as for use in EPL's.	4.6.3			C2
Addition of requirement for specifying various temperatures defined by the standard and including them in user documentation.	4.2 and 7			C3
Connection Integrity (integral components)	5.1.17		X	
Applications of Trace Heating in empty conduit	Annex E		X	

NOTE The technical changes referred to include the significance of technical changes in the revised IEC Standard, but they do not form an exhaustive list of all modifications from the previous version.

Explanations:

A) Definitions

Minor and editorial changes

clarification
 decrease of technical requirements
 minor technical change
 editorial corrections

These are changes which modify requirements in an editorial or a minor technical way. They include changes of the wording to clarify technical requirements without any technical change, or a reduction in level of existing requirement.

Extension addition of technical options

These are changes which add new or modify existing technical requirements, in a way that new options are given, but without increasing requirements for equipment that was fully compliant with the previous standard. Therefore, these will not have to be considered for products in conformity with the preceding edition.

Major technical changes

addition of technical requirements
increase of technical requirements

These are changes to technical requirements (addition, increase of the level or removal) made in a way that a product in conformity with the preceding edition will not always be able to fulfil the requirements given in the later edition. These changes have to be considered for products in conformity with the preceding edition. For these changes additional information is provided in clause B) below.

NOTE 1 These changes represent current technological knowledge. However, these changes should not normally have an influence on equipment already placed on the market.

B) Information about the background of 'Major technical changes'

- C1 There are no additional requirements for temperature controllers and high temperature limiters beyond those of the general industrial standards.
- C2 The application of temperature controllers and high temperature limiters shall be as specified.
- C3 The documentation shall include the various temperatures specified in the standard.

The text of this International Standard is based on the following IEC documents:

Draft	Report on voting
31/1867/FDIS	31/1893/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with the rules given in the ISO/IEC Directives, Part 2, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications/.

This document is to be used in conjunction with IEC 60079-0, *Explosive atmospheres - Part 0: Equipment - General requirements* and IEC/IEEE 60079-30-2, *Explosive atmospheres - Part 30-2: Electrical resistance trace heating - Guidance on application for design, installation and maintenance*.

A list of all parts of IEC 60079 series, under the general title *Explosive atmospheres*, can be found on the IEC website.

The IEC Technical Committee and IEEE Technical Committee have decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

INTRODUCTION

IEC/IEEE 60079-30-1 is intended to provide a comprehensive overview of the essential requirements and testing appropriate to electric surface heating equipment used in explosive atmospheres. The requirements of this part of IEC 60079 are considered to be the minimum requirements for Equipment Protection Levels (EPLs) Gb, Gc, Db, and Dc in explosive atmospheres for gases, dusts, and fibres/flyings. While some of this work already exists in national standards or international standards, this document has collated much of this existing work and added to it. This document also contains the minimum requirements for users applying the Division method of area classification.
